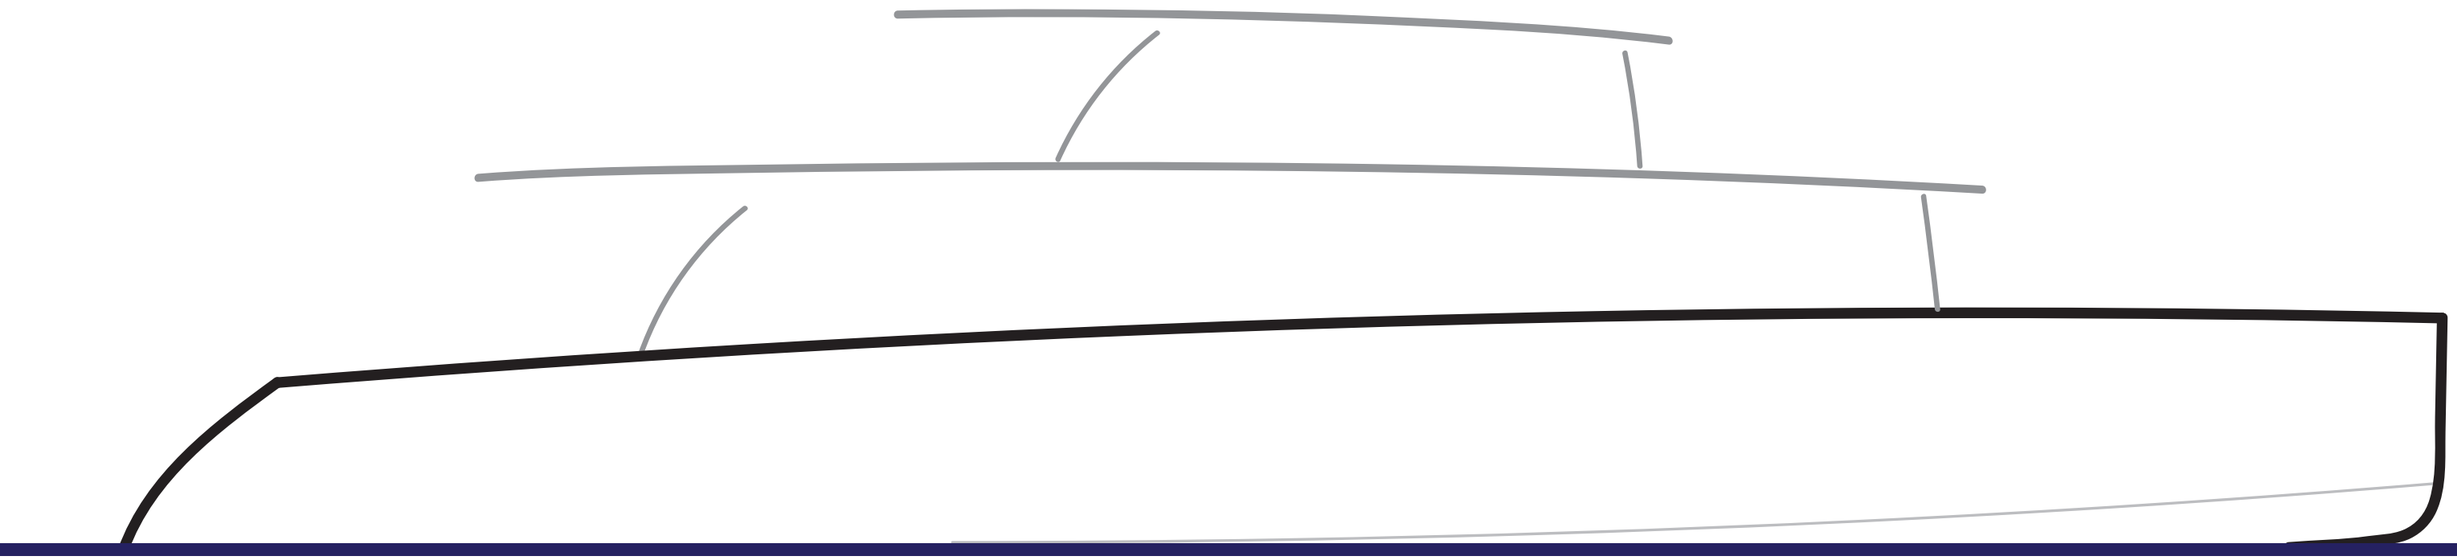
Ardito concept

a project by SANREMOMARE

SDM yachts



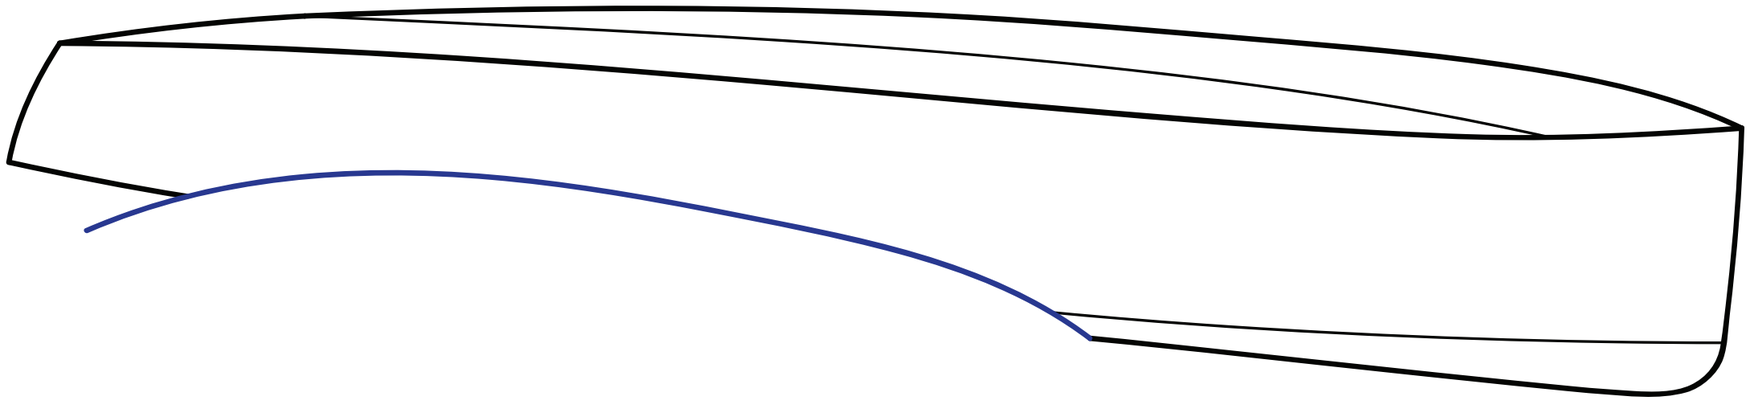
- optimized hull shape

- improve life on board through clever volume layout

- technology and building innovations

HULL SHAPE

our goal is to develop a hull with innovative features.
the concept starts with the design of a fast, agile planing hull, which at the same time offers low hydrodynamic resistance even at low speed, in displacement mode.
these features are combined with lightness and handling, given by the optimization of the structures and the evolved propulsion system.
The result is a boat that combines advanced dynamic qualities and reduced fuel consumption, to a classic and timeless style.



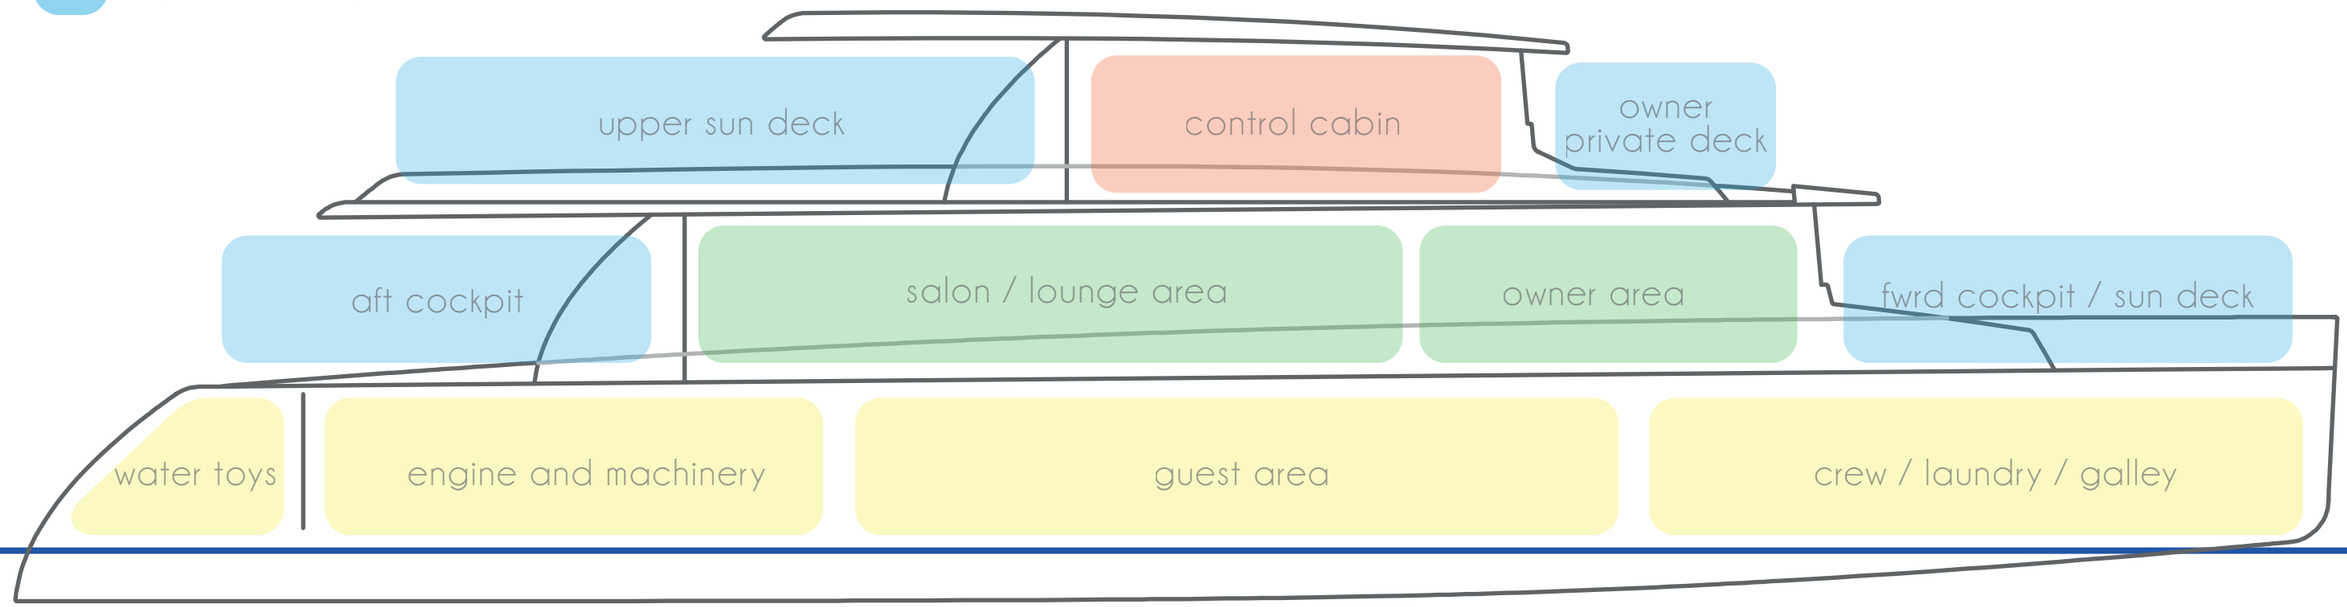
INTERIOR VOLUMES

upper deck

main deck

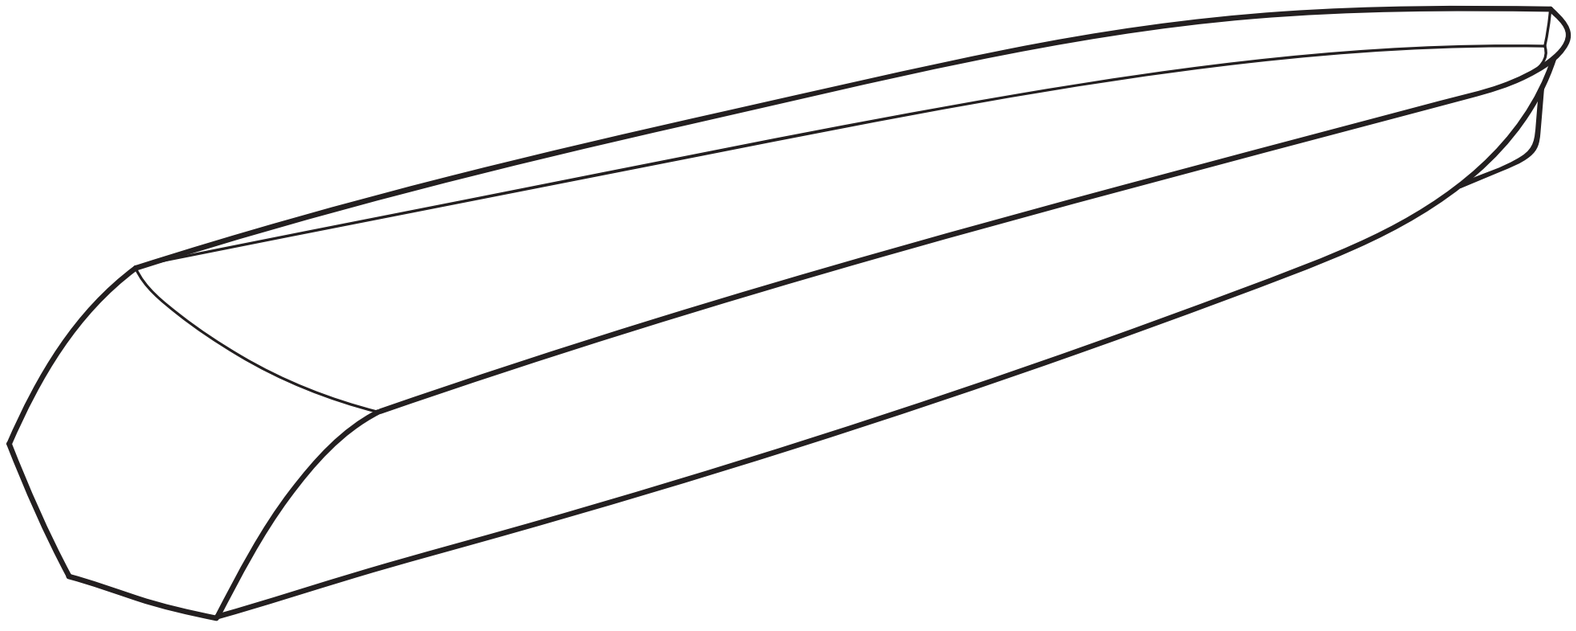
lower deck

open air spaces



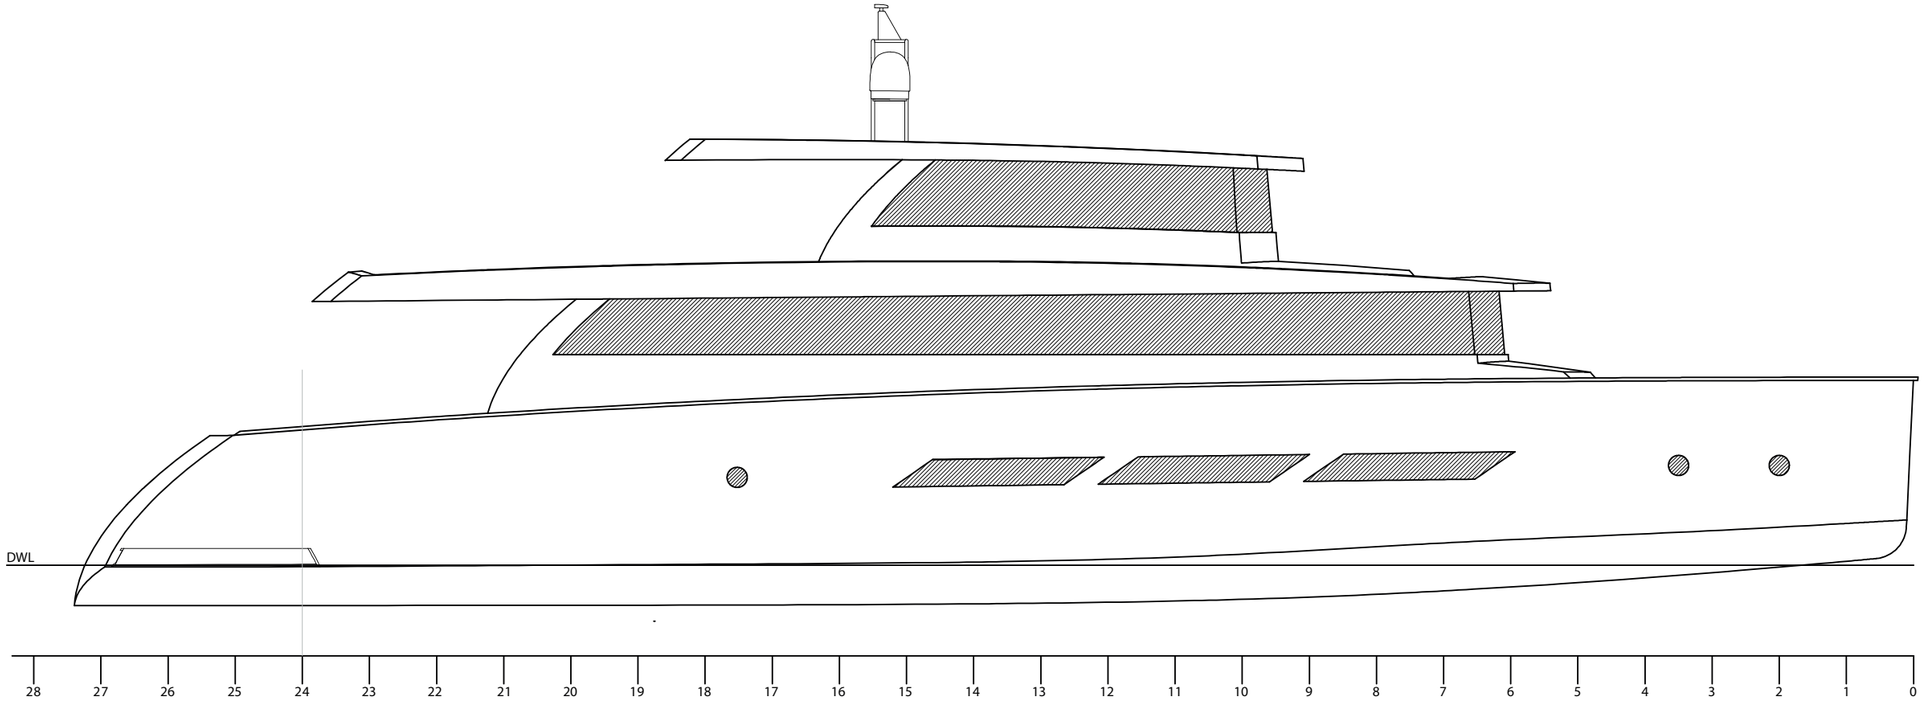
BUILDING INNOVATIONS

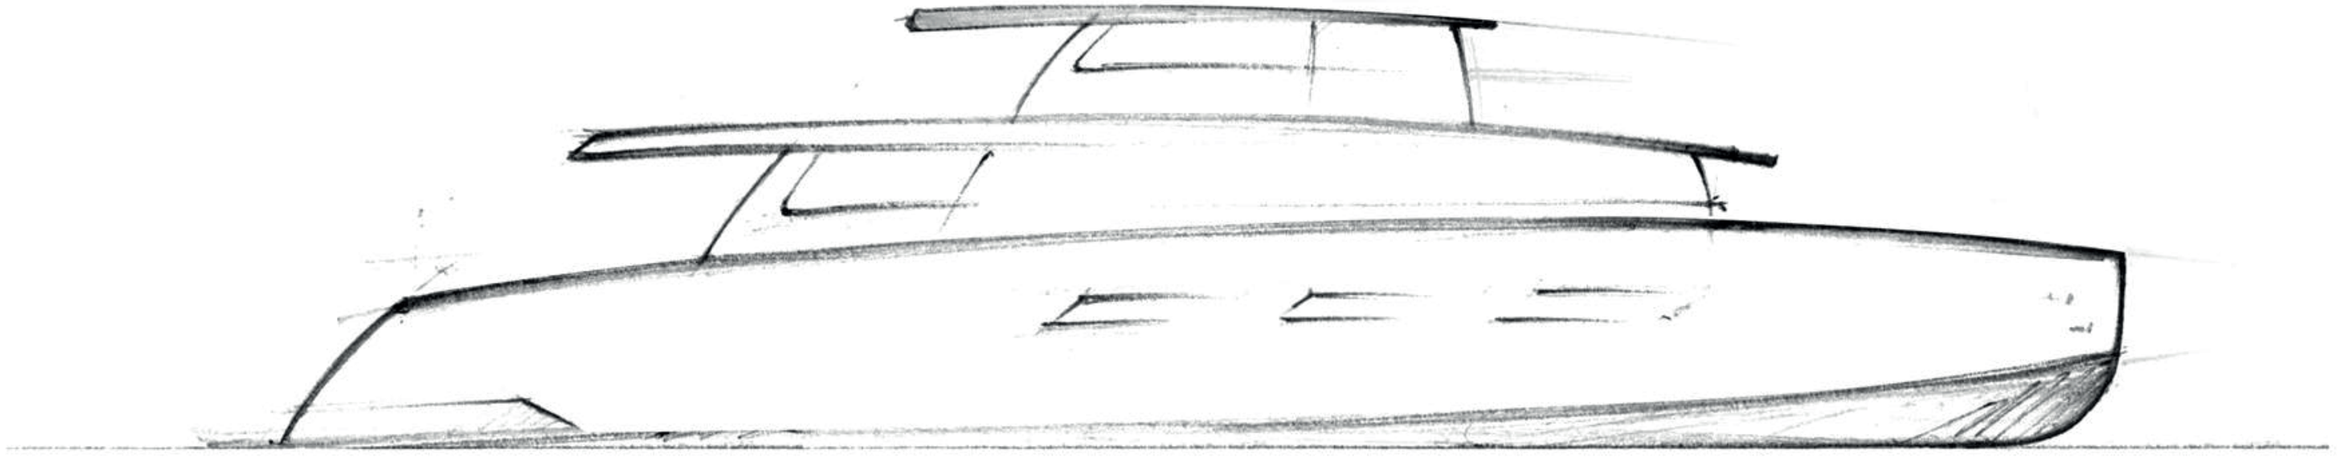
our concept is based on innovative design features.
our intention is to build the boat using a system of separable molds that give the boat a modular, smart and solid construction that is easily reproducible.
the interior layout is also based on the same concept: individual volumes are separated using the boat's longitudinal and transverse stuctures; many of the interior furnishings are studied to have a modular, interchangeable and easily decomposable structure.
These features contribute to the quality, lightness and versatility of the boat.



DIMENSIONS

- loa: 27.5 m
- lwl: 25.6 m
- beam: 6.8 m
- displ. (empty): approx 60 t
- draft: 1.75 m
- fuel: approx 7000 l





upper deck retractable platforms

tender and water toys garage
